How to work out the day of an event from the date recorded.

Example: On what day of the week does 23-09-1957 (23 September 1957) fall?

Answer: Start with the table of years. In the table of months for the appropriate number (0); added to the date of the month (23) this produces the key number (0 + 23 = 23), which gives the required day of the week – **MONDAY**
